

# installation tools

## section guide

Site installation of thermoplastic pipework is straightforward and can usually be completed in a fraction of the time taken to install metallic systems.

PVC-U, PVC-C and ABS systems can all be joined together using a cold solvent welded method which requires no specialised equipment. Polypropylene, Polyethylene and PVDF are resistant to most organic solvents, however, and require heat to weld the material.

Regardless of the choice of material, installation time and efficiency is greatly improved by using the correct tool for the job. In this section we include tools for cutting, chamfering and joining plastic pipes from the extensive Reed Tools range.

Also included is a selection from the WIDOS range of socket fusion welding machines, and from the GAWAPLAST range of butt fusion welding machines. This equipment is available both for sale and hire.

For jointing High Purity PVDF, AGRU offer a range of technically advanced welding equipment designed to ensure cleanliness and consistency.

Detailed installation instructions for all systems are freely available on request. Where required, we are delighted to provide training, either on or off site.

Strap Wrenches	528
Cutting Shears	528
Saws	528
Cutters	529
Bevellers	529
Deburring Tools	529
Tristands	530
Vises	531
Pipe Jacks	531
Pipe Joiners	532
Pipe Repairs and Solvent Welding	534
Hand Held Welding Torches	536
Socket Fusion Welding Tools	540
Butt Fusion Welding Machines	544
Electrofusion Welding Machines	547
IR (Infra-Red) Fusion Welding Machines	550
